

Android force factory reset

Continue

Warning: Your device will be wiped after 1 more failed attempts to be unlocked!

Factory reset an iPad means erasing everything on this iPad. Although we don't normally perform a factory reset, it's useful when you want to protect your private data or fix the system errors of your iOS devices. This article introduces 5 ways to reset your iPad with step-by-step tutorials. Just read on and follow if you find yourself in one of the situations: You need to reset old iPad for sale or giving it away. You need to restore a disabled iPad since you forget iPad password. Factory reset iPad to restore iCloud/iTunes backup. Your iPad is frozen, disabled, stuck at recovery mode or black screen and needs to be fixed by restoring. You want to factory reset your iPad to clear memory space. Again, because you factory restore erases everything on your iPad, to avoid data loss, it's important to backup your iOS devices beforehand. Free Download Buy with 20% off Free Download Buy with 20% off 1. Reset iPad to Factory Settings Without Computer This method can be applied when: you have an accessible iPad (which you still remember the screen passcode and Apple ID used on). As you know, there is a reset function on your iPad. If you can still access your iPad and need to factory reset iPad to fix system errors or restore an iCloud backup, the most direct and convenient way is to use the feature on your iPad. STEP 1 For iOS 14 or earlier, go to "Settings" > "General" > "Reset" and tap on "Erase All Content and Settings". For iOS 15 or later, similarly, select "Settings" > "General" > "Transfer or Reset iPhone", and you will see "Erase All Content and Settings" that you need to choose. STEP 2 You will be asked to confirm your action and enter the passcode. STEP 3 The iPad will reboot as an Apple logo together with a loading bar appears on the screen. Now that your iPhone data is wiped out entirely, you need to set up the iPad again. What's the difference between Reset All Settings and Erase All Content and Settings on iPad? Reset All Settings: This option is not to factory reset your iPad but just reset all the settings to fix subtle errors on your Apple device. It results in no data loss and is only a combination of resetting network settings, keyboard dictionary, home screen layout, etc. Erase All Content and Settings: Tap this option, all contents including apps, music, photos, and personal account information will be erased from your iPad. After this factory reset, your iPad will be like a brand new one and you will be asked to set it again from selecting region, language, Apple ID, etc. 2. Hard Reset/Force Reset iPad This method can be applied when: your iPad meets some system errors, and you want to fix it without going straight to erase all the data. Though factory reset is an effective way to repair iPad system problems, before you step forward to it, you can first try simpler methods like hard reset to fix it. Hard resetting an iPad will not erase any data. You can try this way as the first aid to fix a dead/frozen iPad with the following steps. Hard Reset an iPad Without a Home Button Most of the newly released iPad models comes without a home button. To force restart the iPad without home button like iPad Pro, here is what you should do. STEP 1 Press the Volume Up button and then release. STEP 2 Press the Volume Down button and then release. STEP 3 Keep pressing the Power button until the Apple logo appears. Hard Reset an iPad with Home Button For the older models of iPad which has a home button, you can follow these steps to force restart it: STEP 1 Press and hold both the Sleep/Wake and Home buttons for at least ten seconds, until you see the Apple logo. STEP 2 Then release the two buttons. The iPad will restart. Note Your iPad data won't be erased after a hard reset. 3. Reset iPad to Factory Settings with iTunes This method can be applied when: you cannot open your iPad, but you've got a Windows PC with the latest version of iTunes installed (or you've got a Mac computer). If you have previously synced your iPad with iTunes STEP 1 Connect the device to a computer with a USB cable. STEP 2 Tap on your iPad icon and choose the Summary tab on the left panel, then click on "Restore iPad" to perform a factory restore. Note If this is your first time restoring, please wait for the firmware file to be downloaded. Once it is downloaded, it'll ask if you really want to restore. Confirm to proceed. If you have never synced your iPad with iTunes before, you need to sync it first. STEP 3 Put your iPad into Recovery Mode: For iPad with a Home Button: Press and hold the Home button and the Top or Side button simultaneously. When the apple logo appears, keep holding both of the buttons until you see the recovery screen. For iPad without a Home Button: Quickly press and release the Volume Up button, then press and hold the Top button. When the apple logo shows on your iPad screen, keep holding the Top button until it enters the recovery mode. STEP 3 Connect your iPad to the computer. There will be a pop-up window saying that there's problem with your iPad, Click "Restore" to reset your iPad to factory settings. 4. Factory Reset iPad Without iTunes or Passwords This method can be applied when: you cannot use your iPad or iTunes to do the factory reset, and you have forgot the passcode of your iPad. It's not dead end when you unfortunately find that your iPad is not accessible, and your iTunes cannot function to factory reset your iPad. At this time, the third-party software can come to use to solve your problem without iTunes or you entering iPad passcodes. FonePaw iOS System Recovery is a professional iOS system recovery tool which can factory reset your iPad and fix various system problems without iTunes. For example, you can easily use the program to wipe a locked iPad or fix iPad that won't work properly. This software is perfectly compatible with iPadOS systems, or other Apple devices running iOS 15 or lower. Free Download Buy with 20% off STEP 1 Install FonePaw iOS System Recovery on your computer and open the program. Click Start. STEP 2 Connect your iPad to computer. If your iPad is abnormal, this page will be displayed on your screen. Choose the Repair Mode you prefer to use and Click Confirm to continue. Note: The Standard Mode can fix your iPad issues without erasing your data, while the Advanced Mode will go deeper and repair your iPad with factory reset. STEP 3 According to the repair mode you have selected, you need to put your iPad in Recovery/DFU mode. There will be clear instructions for you to follow. STEP 4 The info about your iPad will be displayed. Verify if the information is correct, if it is, then click Repair. The program will then factory reset your iPad and fix it. Free Download Buy with 20% off Free Download Buy with 20% off If you need to recover iPad data after the factory reset, please read on with How to Recover iPad Data After Factory Reset. 5. Reset iPad to Factory Settings Without Computer This method can be applied when: You cannot access your iPad, but have enabled FMI for your iPad on iCloud and remember your Apple ID and passwords. Your iPad is connected to Internet. Actually, one more method to factory reset your iPad is to use the "Remote Wipe" feature of FMI to erase the contents and passcode of your device. With this method, you don't have to use iTunes or even a computer, and can factory reset your iPad directly via iCloud.com. STEP 1 Log in to iCloud with your Apple ID and password. STEP 2 Select "Find My iPhone" > "All Devices" at the top of your browser window. Then, choose the iPad from the device list. STEP 3. Then you will be displayed with 3 features: Play Sound, Lost Mode, and Erase iPad. Tap "Erase iPad", and your iPad will be factory reset once it's connected to Internet. Extra Tip: How to Recover iPad Data from iTunes/iCloud After Factory Reset After factory reset, your iPad will lose all the data. For iPad data recovery after factory reset, it's recommended to use FonePaw iPhone Data Recovery, a program dedicating to flexibly recover lost photos, messages, notes, contacts, and more from iPad after factory resetting. As a professional iOS data recovery program, FonePaw supports all generation of iPads, and can help you easily extract iPad data from iTunes/Cloud backup after the iPad returns to factory settings. Compared to the official method that requires you to restore the entire backup without knowing the exact contents, this software can let you preview the contents in the backups and selectively restore the data you want. Download the FREE TRIAL version of the program below to have a try. Free Download Buy with 20% off Free Download Buy with 20% off STEP 1 Download FonePaw iPhone Data Recovery on the computer. STEP 2 If you have an iTunes backup before factory resetting iPad, choose "Recover from iTunes Backup File" and select one of the back-ups of your iPad. You can then see all data on the backup and select those you need to recover. STEP 3 If you have backed up iPad to iCloud, you can choose "Recover from iCloud Backup Files" and sign in with your iCloud account. That's all the method that you can reset an iPad to factory settings. If you have any question, please put your comment below. The Samsung Galaxy S8 may be one of the older members of Samsung's Galaxy S range, but it's an absolute classic. Its sleek looks, capable hardware, and great camera mean anyone who has one may not want to give it up anytime soon. But a phone starts to slow down as it ages, and if you're not planning on replacing it, that's going to get very annoying very fast. Thankfully, there are ways to help speed a phone back up, and one of those is a factory reset. A full reset helps to clear out all the cobwebs that have built up over the years, and can significantly speed a phone up. On the flip side, you may be palming off or selling an old Galaxy S8 — at which point a factory reset is even more crucial, as it makes sure your precious data doesn't fall into anyone else's hands. But regardless of why you're doing it, a factory reset is simple. Here's how to factory reset a Samsung Galaxy S8. Factory reset protection Factory Reset Protection (FRP), a security measure Google introduced in Android 5.0 Lollipop, is designed to prevent thieves from wiping your device and using or selling it. But if you don't disable it, then it can interfere with a factory reset. When you reset a phone to factory default with FRP enabled, it'll prompt you to enter the user name and password for the last Google account registered to the device. That's good and fine if you're the owner, but obviously problematic if you've sold it or given it to another person. Thankfully, you can disable it so this doesn't happen. Here's how to disable Factory Reset Protection on the Galaxy S8: First, remove your Google account. Go to Settings > Cloud & accounts > Accounts and tap on Google. Then tap the three vertical dots in the upper right, or More > Remove account. Make sure to remove every Google account you see. Next, you'll have to remove your Samsung account. Head to Settings > Lock screen and security > Find My Mobile. Enter your password, tap on your account at the top, and select More > Remove account. Now that you've disabled Factory Reset Protection, it's a good idea to back up your apps and settings. Alternatively, you can skip straight to the factory reset process. Backing up your data How to back up apps To back up the apps and games you've installed on your Galaxy S8, head to the Settings menu. Tap Cloud and accounts, then Backup & restore. Tap Back up my data, and choose whether or not you'd like to back up your account data. Wi-Fi passwords, and other settings to Google's servers. How to back up contacts Saving your contacts to the cloud is just as easy as backing up your apps and settings. Open the Settings menu, and then tap Cloud and accounts. Tap Accounts, and then select the account you'd like to sync. Tap the three vertical dots in the top-right corner, and tap Sync now. Your cloud-stored contacts should now be up to date. How to back up media and pictures Factory resetting your Galaxy S8 doesn't have to mean losing your photos, videos, and other media. Here's how to back everything up. Tap the Samsung folder, and then tap My Files. Tap Internal storage. Tap the three vertical dots icon, and then tap Share. Select the content you want to backup. Tap Share, and select the location you want the content to be shared with. How to back up to a microSD card One of the benefits of using a Samsung Galaxy S8 is having a microSD card slot. Not only are they an affordable option for more memory, but they function as storage space to back up your apps, contacts, and media files. The built-in Smart Switch app on your phone allows you to

seamlessly do that. Make sure you have a microSD card with enough storage inserted into your Galaxy S8. Open up your settings and search Smart Switch. Tap on the microSD card symbol on the upper right corner. Tap on Back up on the bottom. Check or uncheck the items that you'd like to back up. You can tap on the arrows next to the labels to expand. Tap Back up and let Smart Switch do the rest of the work! Reset your Galaxy S8 from the settings menu The easiest way to factory reset your Galaxy S8 is from the phone's settings menu. Make sure it's powered on, and then go to Settings > General management > Reset. Tap on Factory data reset, then Reset, and finally Delete all. Now sit tight — the process takes a few minutes. Once it's finished, you'll see the Galaxy S8's welcome screen. Reset your Galaxy S8 from the recovery menu Sometimes, software corruption, persistent malware, and other factors make resetting your Galaxy S8 from the settings menu an unrealistic proposition. Luckily, you can erase the phone's data without having to boot into its operating system by using the recovery menu. Make sure your Galaxy S8 is powered down. Hold the Volume up, Bixby, and Power buttons at the same time, and keep them held down until you see the Samsung logo. After 30 seconds, you should see the Android Recovery Menu. If your phone boots up as normal, try repeating the previous two steps. Press the Volume down button four times, until Wipe data/Factory reset is highlighted. Select it using the Power button. Press the Volume down button seven times until Yes — delete all user data is highlighted. Select it using the Power button, which triggers the reset process. Once the factory reset is complete, press the Power button and select reboot system now. Once the Galaxy S8 boots, you'll see the default welcome screen. Reset your Galaxy S8 using Samsung's Smart Switch PC software If you'd prefer to use a computer to reset the Galaxy S8, good news: Samsung's Smart Switch software makes it simple. It'll guide you through the factory reset process, install the newest firmware on your Galaxy S8, and wipe your apps, settings, and personal data. There are a few prerequisites, though. You'll need to plug the Galaxy S8 into one of your PC's USB ports using a USB-C cable, and you'll have to download and install the Smart Switch software from Samsung's website. From there, it's all downhill. If you're plugging in your Galaxy S8 for the first time, you'll have to wait for the necessary drivers to install. Once that's finished, move on to the next steps. Launch the Samsung Smart Switch software you installed earlier. Your phone will appear in the list of devices. Click more in the top-right corner of the screen, and then click Emergency Software Recovery and Initialization. Click Device Initialization. Click OK; click OK again to confirm the initialization; and click OK a third time to confirm you've read the list of precautions. Choose whether you want to create a backup. If you'd rather not, click Skip backup. If you get a User Account Control prompt, click Yes. Smart Switch will download and install the latest Galaxy S8 firmware to your device. Once it finishes, click OK. Reset your Galaxy S8 using findmymobile.com Find My Mobile has a custom security feature that allows concerned users to override their phones and force a factory reset online— even if their phone is lost or stolen and not in their possession. Users can also backup their important and sensitive data to the Samsung Cloud remotely before the factory reset even starts. The only requirement to successfully back up your data via a remote connection is to ensure that your smartphone is on and connected to wireless internet. To remote-factory reset your lost phone, follow a few quick steps: Navigate to the Find My Mobile website and punch in your Samsung account login to connect. In your account, you'll find a list of devices that are linked to your login number. Select the device you wish to reset. Click Erase data > Erase. If the phone erases successfully, a progress bar should appear on your screen to inform you of the remaining time left in the reset. There are a few other factory reset techniques you could try out to revert your device. In our experience, most resets will make your S8 as good as new. It's a good idea to restore your device to factory settings if you're preparing to sell it or if your phone has been stolen. You can learn more about the features of your Samsung smartphone with these Galaxy S8 tips and tricks. If a factory reset doesn't reverse your phone's problem, check out this list of common Galaxy S8 problems and how to fix them for detailed solutions. Editors' Recommendations
